- Develop Use Case Textual Description for "Process Sale" and "Handle Return" use cases.

Process Sale:

Use Case ID	UC-01
Actors	Cashier, Customer
Preconditions:	<ul style="list-style-type: none">● The cashier is logged into the POS system.● The store has sufficient stock of the goods being sold.●
Postconditions:	<ul style="list-style-type: none">● A sale transaction is completed.● Payment is processed successfully.● A receipt is printed and given to the customer.

<p>Main Flow:</p>	<p>The cashier initiates a new sale transaction in the POS system.</p> <ul style="list-style-type: none"> • The cashier scans the barcode of each item the customer wishes to purchase. • The POS system retrieves the item details (name, price) from the backend catalog. • The inventory is updated to reflect the new stock level for each item. • The system displays the current sale summary, including item names, quantities, prices, and total amount. • The cashier checks for any applicable promotions or gift coupons. • If a coupon is applied, the system updates the total amount accordingly. • The cashier presents payment options to the customer (cash, credit card, check). • The customer selects a payment method and provides the necessary payment information. • The POS system processes the payment: <ul style="list-style-type: none"> ○ For cash, it verifies the amount and updates the cash register. ○ For credit card, it interacts with the payment processor to complete the transaction. ○ For checks, it verifies the check information. • Once payment is confirmed, the system marks the transaction as complete. • A receipt is generated and printed.
<p>Alternative Flows:</p>	<ul style="list-style-type: none"> • If the item does not meet the return criteria, the system notifies the cashier and provides the reason (e.g., past return period, damaged item). • If the refund cannot be processed, the system informs the cashier and provides options for resolution.

Handle Return :

Use Case ID:	UC-02
Actors	Cashier, Customer
Preconditions:	<ul style="list-style-type: none">• The cashier is logged into the POS system.• The customer has the receipt for the item they wish to return.
Postconditions:	<ul style="list-style-type: none">• The return transaction is completed.• Inventory is updated to reflect the returned item.• A return receipt is printed.

<p>Main Flow:</p>	<ul style="list-style-type: none"> • The cashier initiates a return process in the POS system. • The cashier inputs the receipt details into the POS system to verify the transaction. • The cashier scans the barcode of the item being returned. • The system retrieves the item details and verifies if the item is eligible for return. • The system displays the return summary, including item details and any applicable return policies . • The cashier confirms with the customer how they would like to receive the refund . • The system processes the refund: <ul style="list-style-type: none"> ○ For cash, the amount is given back to the customer from the cash register. ○ For credit card, the system processes a refund to the original card. • The system updates the inventory to reflect the returned item. • A return receipt is generated .
<p>Alternative Flows:</p>	<ul style="list-style-type: none"> • If the item does not meet the return criteria, the system notifies the cashier and provides the reason (e.g., past return period, damaged item). • If the refund cannot be processed, the system informs the cashier and provides options for resolution.

- Identify Entity/Boundary Control Objects

Entity Objects

1. **Product**
 - Responsibilities: Represents items available for sale.
2. **Customer**
 - Responsibilities: Represents customers, including their purchase history and preferences.
3. **Transaction**
 - Responsibilities: Represents a sale transaction, including the items purchased and payment details.
4. **Coupon**
 - Responsibilities: Represents discount coupons that can be applied to transactions.
5. **Return**
 - Responsibilities: Represents items returned by customers, including details about the original transaction.
6. **User**
 - Responsibilities: Represents employees using the POS system, including cashiers and administrators.

Boundary Objects

1. **POS User Interface**
 - Responsibilities: Provides the user interface for cashiers and administrators to interact with the system, including input forms and display screens for transactions.
2. **Receipt Printer**
 - Responsibilities: Interface for printing receipts for customers after transactions are completed.
3. **Payment Gateway**
 - Responsibilities: Interface to process credit card and electronic payments securely.

Control Objects

1. **TransactionController**
 - Responsibilities: Manages the flow of processing a sale transaction, including item scanning, payment processing, and receipt generation.
2. **ReturnController**

- Responsibilities: Manages the flow of handling return transactions, including verifying receipts, processing refunds, and updating inventory.

3. **InventoryController**

- Responsibilities: Manages stock levels and updates inventory when items are sold or returned.

4. **UserController**

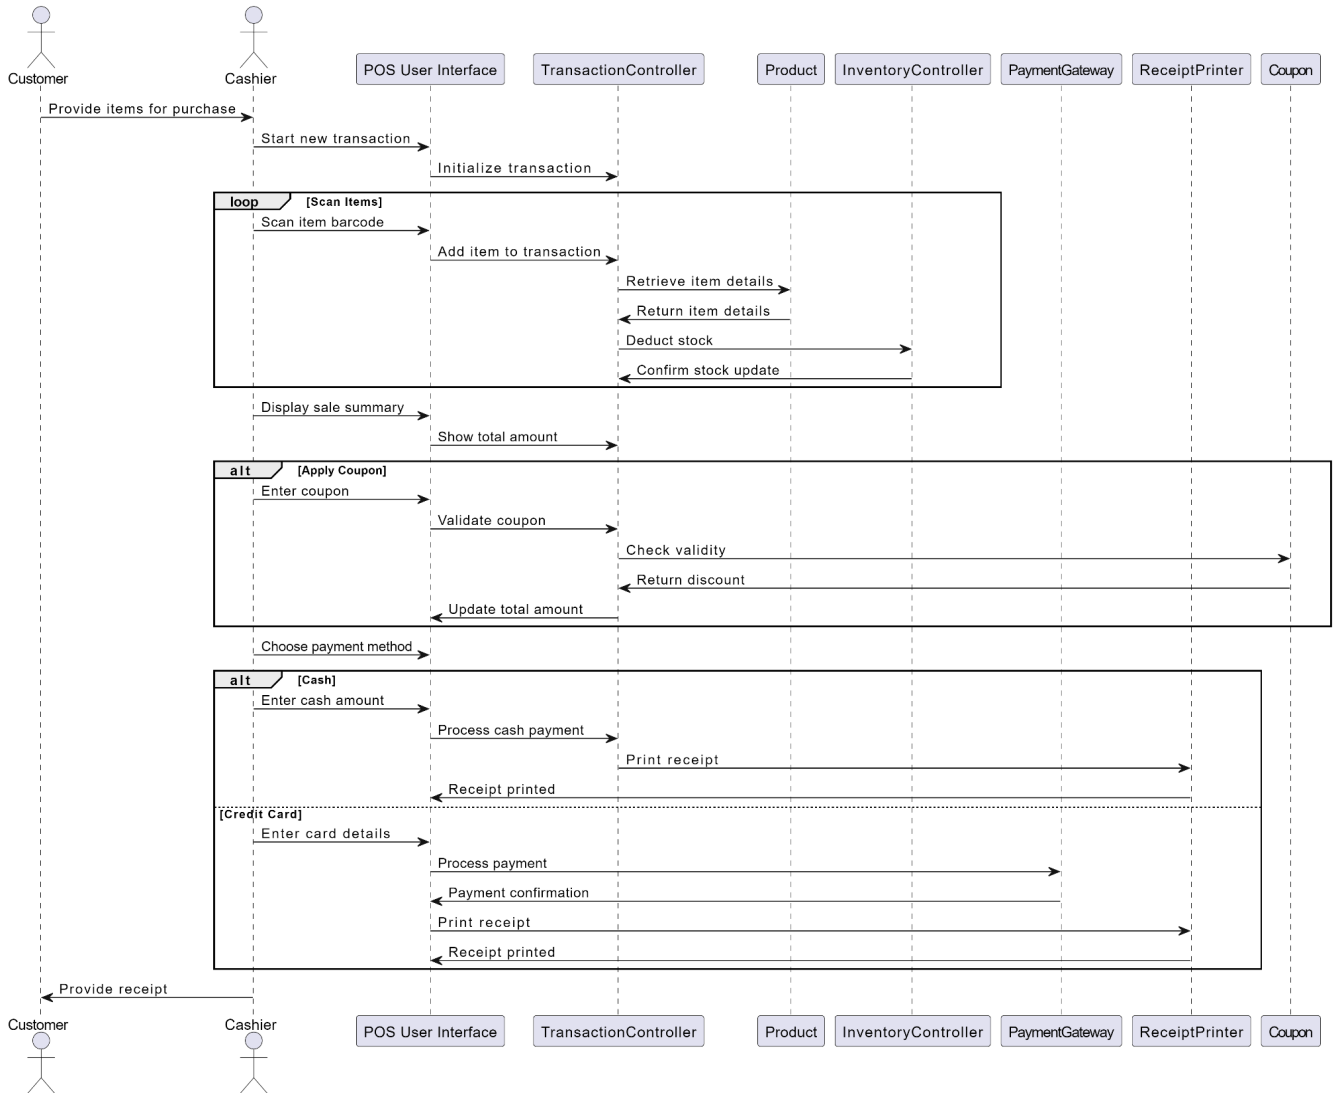

- Responsibilities: Handles user authentication, role management, and access control for the POS system.

5. **CouponController**

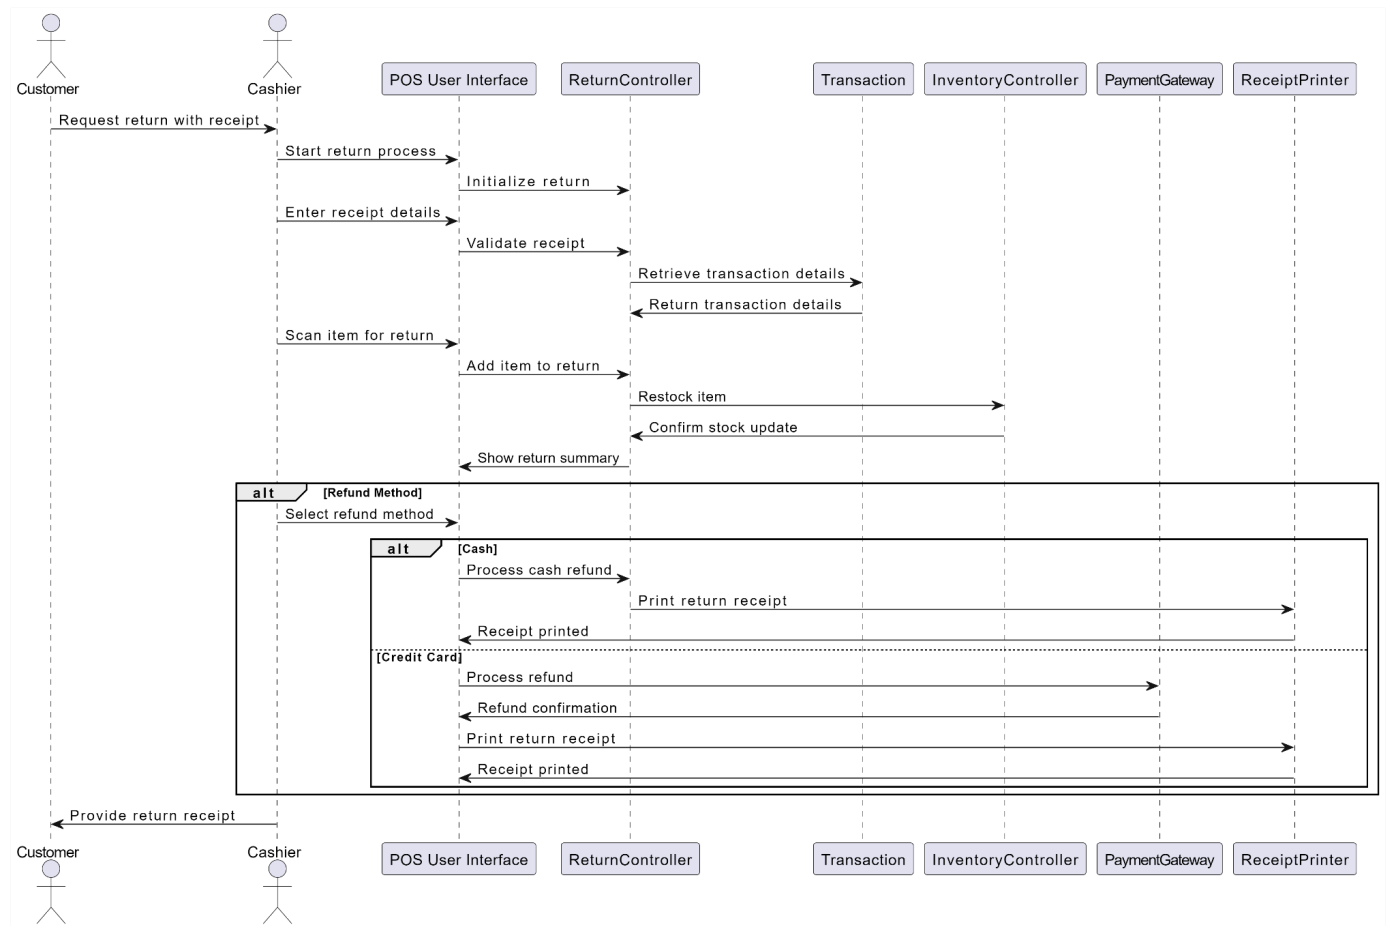

- Responsibilities: Manages coupon validation and application during transactions.

- Develop Sequence Diagrams

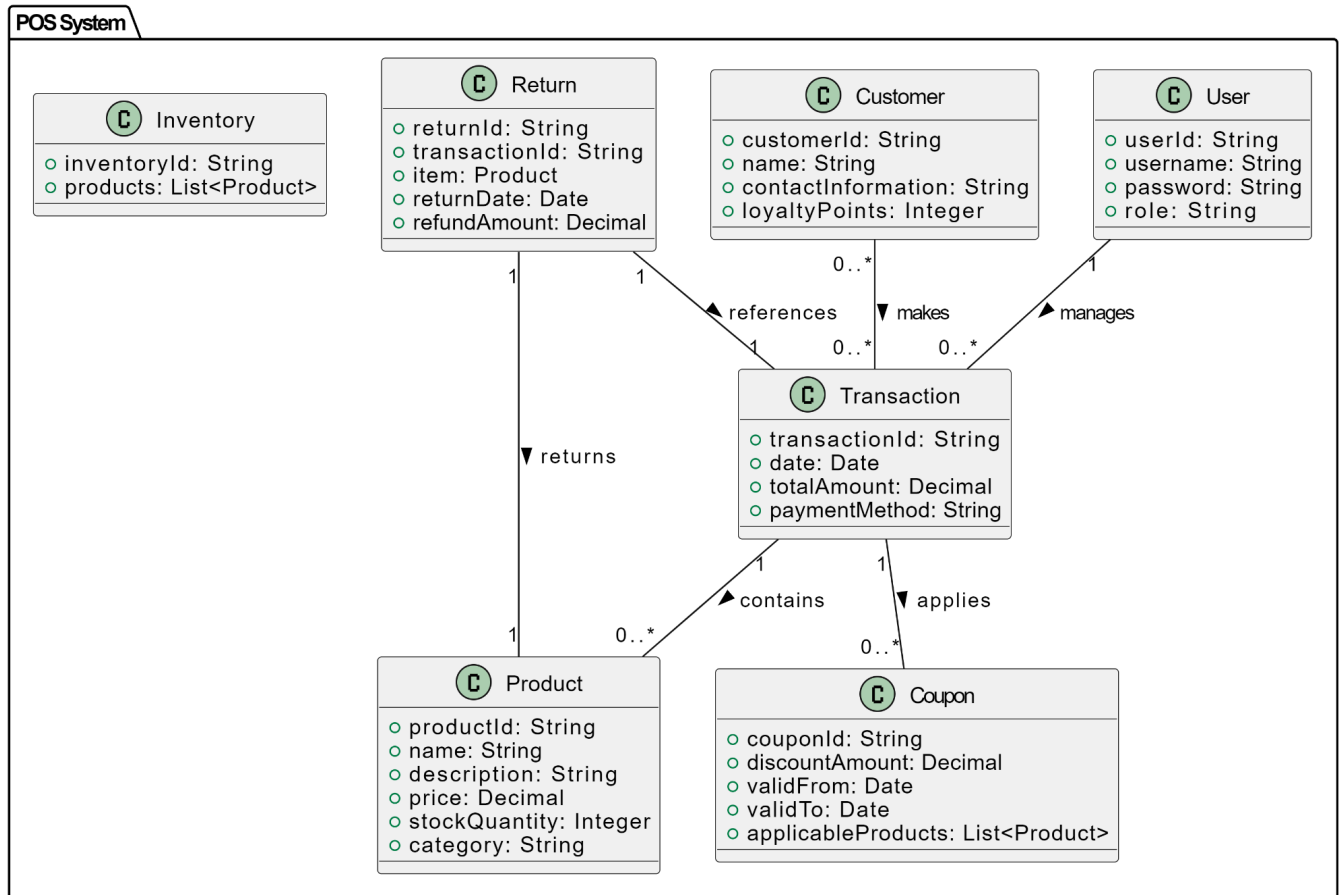

Process Sale:

Handle Return:

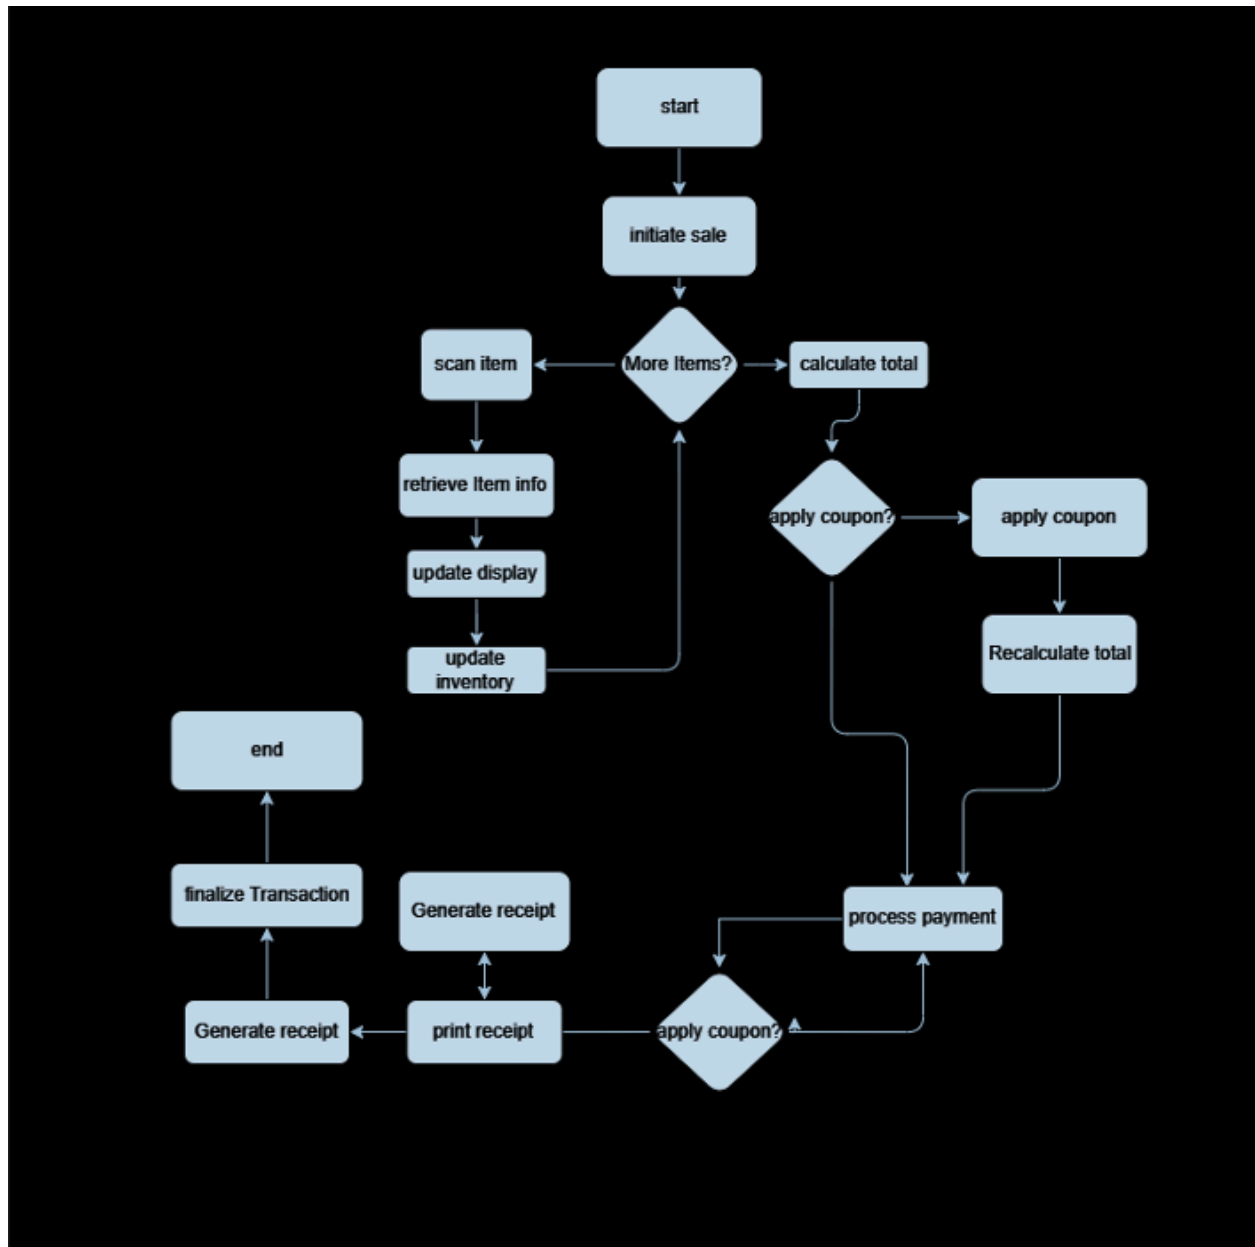

- Develop Analysis Domain Models

- Develop activity diagram for "Process Sale" and "Handle Return" use cases.
